

METHOD, SYSTEM, AND PROGRAM FOR PROCESSING A
PACKET TO TRANSMIT ON A NETWORK IN A HOST SYSTEM
INCLUDING A PLURALITY OF NETWORK ADAPTORS

5

ABSTRACT

Provided are a method, system, and program for processing a packet to transmit on a network in a host system including a plurality of network adaptors. A packet is received at a first network adaptor. The first network adaptor performs load balancing operations to select one network adaptor to transmit the received packet. If the
10 determined network adaptor is a second network adaptor, then the received packet is forwarded to the second network adaptor.
